

EVALUATION GRID FOR MANAGEMENT

CPR and AED use - 2 rescuers - all customers

Evaluate environment for potential hazards

Assess level of consciousness (LOC)

Call EMS

Attempt to obtain AED

Position victim (turn onto back if necessary)

Open airway

Rapid visual check for no breathing or abnormal breathing for 5-10 seconds

Absent or abnormal breathing: CPR protocol

If no AED, start compressions (30:2)

If AED is present, begin AED protocol immediately

One rescuer continues compressions and ventilations while the second simultaneously sets up the AED as soon as it is available (Do not interrupt compressions for more than 10s.)

After analysis and/or shock, the second rescuer resumes compressions

Rescuers alternate roles every two minutes, or less if necessary

Continue CPR and/or AED until EMS arrives or normal breathing resumes

If victim shows signs of normal breathing, assess ABCs and intervene appropriately

Effective breathing: pre-hospital clinical assessment

Circulation assessment (pulse and severe hemorrhage)

Secondary exam

WARTS (warmth, ABCs, Rest & reassure, Treatment, Semi-prone/semi-sit)

Candidate is able to recognize signs/symptoms and treat them.

Candidate adequately simulates a 9-1-1 call.

Candidate ensures their own safety for the duration of the intervention.

Candidate respects the objectives of emergency care (preserve, prevent and promote).
